

Compost Workshop

Description

This workshop is an adventure into all things decomposing. We will explore fungi, identify the insects that live on our compost pile, and the ecosystems they maintain. Students learn about desertification and how rotting wood and cows can save the world! Through garden tours and activities, students will get a better understanding of how these cycles of life and decay are key to all life on earth.

Key Learning Outcomes

- Compost
- Hugelkultur
- Death and decay
- Decomposition microbes and insects

Time Frame

1 period

Materials

- Pens
- Notebooks or journals for keeping notes

Related Workshops

- Bokashi Composting
- Vermicomposting
- Compost Tea
- Mycelium
